ReliableDR

The # 1 Choice for Disaster Recovery Assurance

Automate the Disaster Recovery Process to Dramatically Reduce the Cost & Complexity of Failover, Failback & Testing
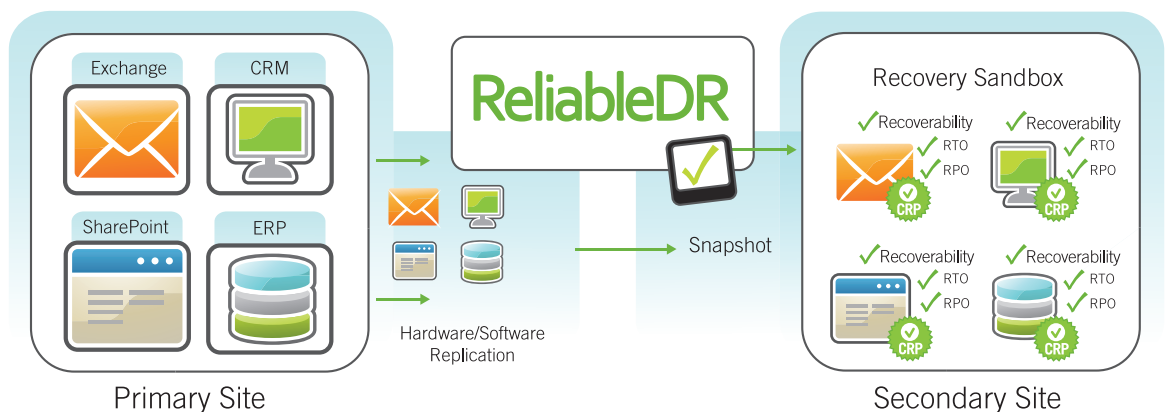

ReliableDR automates replication and failover of your critical systems so that all Disaster Recovery processes, including failover and failback, can be automated and tested daily at a far lower cost than complex, manual alternatives. As a result, ReliableDR enables unmatched levels of resiliency for virtual IT infrastructures, and allows you to fully align your IT disaster recovery and business continuity plans.

ReliableDR gives you Disaster Recovery Assurance by providing continuous proof that your systems are fully recoverable, enabling you to:

> *"ReliableDR is unique. It has eliminated the need for manual DR testing & guarantees that our RPO & RTO for email & other business critical IT Services can always be met… whatever the scenario."*
>
> Diego Gonzalez,
> Santalucia Insurance

- Provide 100% automated DR failover, failback and testing for continuous proof your IT services are fully recoverable.
- Automatically certify that RPOs and RTOs are achieved.
- Fully automate DR testing as often as you want to dramatically reduce the time, expense and resources to ensure business continuity.
- Deliver complete reporting to satisfy regulatory compliance requirements.
- Get immediate detection and alerting of deviations in recovery time and recovery point actuals via dashboards, exported reports, email reports, and SNMP alerts.
- Guarantee rapid and reliable failover of virtualized applications and business services.
- Expedite BC/DR audits using pushbutton automation to spin-up applications when requested, without disrupting production.
- If you are a service provider, obtain ReliableDR use stats in real time to facilitate pay-per-use for cloud-based Recovery as a Service.
- Supports Unitrends backup and replication with both Recovery-Series physical appliances and Unitrends Enterprise Backup virtual appliances.

ReliableDR: A New Paradigm in Disaster Recover

## Automated, Continuous, Service-Oriented DR Testing

Removes the cost and complexity associated with outdated, infrequent and manual DR test procedures. Directly certifies that your DR strategy is sound by frequently testing it against defined objectives.

Application Aware Testing

Measures accurate Recovery Time Actuals (RTAs) for each application individually. Leverages out-of-the box testing capabilities for the most popular Windows and Linux components like Exchange, SQL Server, Active Directory, and more.

Certified Recovery Points

Protects against configuration drift and accidental changes that can replicate to the DR site by automatically storing multiple recovery points that are certified through detailed, automated testing procedures.

Compliance Reporting

Proves and demonstrates to compliance auditors the definitive actual performance of your DR implementation against objectives.

Test, Failover and Failback

Expedites failover and failback audits with pushbutton automation and no production impact. Drastically reduces the outage time in case of a live failover.

vCloud Director Integration

Organizations leveraging the VMware vCloud Director platform can now failover faster than ever before with the ReliableDR vCloud integration. This new functionality removes tedious manual processes and enhances the automation of disaster recovery while ensuring the multi-tenancy provided by vCloud.
